WHY BEYKOZ UNIVERSITY?

Unique Education Model

As Beykoz University, we want our students to associate what they have learned in university with those in real life. As part of our education and training programmes, internship or project is compulsory in our curriculum. In most of our programmes students spend at least one semester in a workplace operating in their field. We implement the model of 7+1 semester internship for our bachelor's degree programmes, 3+1 semester internship for vocational degree programmes. Internship process is being managed by the Internship Coordination Unit of the University.

Personalised Education and Support

The rapidly developing and changing business world and social needs have made it necessary for all students to develop themselves individually outside learning areas. Our university gives private education and support for its students to gain competencies expressed as 21st century competencies. Our students will have chance to improve themselves with Competency Development Program.

Learning By Experience

Our students improve their skills and strengthen their employment opportunities during their education and training with well-equipped laboratory and workshop facilities with internship or project in their fields at least for 1 semester.

Advanced Technology Awareness

Usage of Advanced Technology is one of building blocks of Beykoz University's teaching and learning approach. Reaching the exact information from data depending on the rapid development of communication and information technologies, evaluating these data and producing solutions is a competency that our students in all departments acquire.

Internationalisation

Beykoz University provides a multicultural, international environment with foreign students while offering international opportunities and recognition to its students through partnerships and collaborations that it has developed with other countries.

6 Campuses		1 Vocational School	25 Postgraduate Programmes
